**E-business, E-government & Small and Medium-size Enterprises** Apr 10 2022 This work highlights successful policy and practices which encourage the success of small and medium-sized enterprises (SMEs) in numerous different countries. It offers insights into addressing the significant issues that are of importance to the small business sector.

**Size Limits of Very Small Microorganisms** Jan 19 2023 How small can a free-living organism be? On the surface, this question is straightforward-in principle, the smallest cells can be identified and measured. But understanding what factors determine this lower limit, and addressing the host of other questions that follow on from this knowledge, require a fundamental understanding of the chemistry and ecology of cellular life. The recent report of evidence for life in a martian meteorite and the

prospect of searching for biological signatures in intelligently chosen samples from Mars and elsewhere bring a new immediacy to such questions. How do we recognize the morphological or chemical remnants of life in rocks deposited 4 billion years ago on another planet? Are the empirical limits on cell size identified by observation on Earth applicable to life wherever it may occur, or is minimum size a function of the particular chemistry of an individual planetary surface? These questions formed the focus of a workshop on the size limits of very small organisms, organized by the Steering .Group for the Workshop on Size Limits of Very Small Microorganisms and held on October 22 and 23, 1998. Eighteen invited panelists, representing fields ranging from cell biology and molecular genetics to paleontology and mineralogy, joined with an almost equal number of other participants in a wide-ranging exploration of minimum cell size and the challenge of interpreting micro- and nano-scale features of sedimentary rocks found on Earth or elsewhere in the solar system. This document contains the proceedings of that workshop. It includes position papers presented by the individual panelists, arranged by panel, along with a summary, for each of the four sessions, of extensive roundtable discussions that involved the panelists as well as other workshop participants.

**Surviving Small Size** Jan 07 2022 In 1987 St. Vincent's Prime Minister James Mitchell called on his fellow Prime Ministers in the Eastern Caribbean to merge their separate countries into a single state. He argued that individually they had exhausted the possibilities of separate independence and they could only pursue regional and

international development and indeed economic survival by pooling their scarce resources to combat common problems. By the end of the year all the Leeward Islands rejected the initiative although it remained very much alive among the governments of the Windward chain, Grenada, St. Vincent and the Grenadines, St. Lucia and the Commonwealth of Dominica. During the next eight years, efforts of the Windward Islands to merge were debated but the initiative for unification ultimately died. Through extensive interviews and analyses of primary documents, Lewis paints a compelling picture of island and regional jealousies and conflicting economic priorities, which prevented the Windward and Leeward Islands from cooperating and which ultimately destroyed the movement for political unification in the Windwards. Ultimately, the unification movement failed because the process was dominated by elites a

International Entrepreneurship in Small and Medium Size Enterprises Aug 02 2021 The drivers of globalization are removing the barriers that segregated the competitive space of the small and large firms in the past. It is becoming increasingly difficult for independent small firms to thrive in their traditional markets unless they are

globally competitive. Managing an enterprise's commercial, industrial and political relations well, regardless of size and location, is the essence of the entrepreneurial challenge in this competitive arena. Small and medium size enterprises (SMEs) often face very different issues than large multinational enterprises do when confronting internationalization. This volume provides an in-depth discussion of these challenges. The contributors to this volume explore the emerging patterns of SME growth and international expansion in response to the evolving competitive environment, dynamics of competitive behavior, entrepreneurial processes and formulation of strategy. They examine the basis and requirements of growth and expansion from three perspectives: the rapidly-changing environment in which business is conducted, entrepreneurial characteristics, and the evolving strategic and competitive response to this changing business environment. Business leaders, scholars and students interested in international business and entrepreneurship will welcome this volume.

*The Rise of Africa'S Small & Medium Size Enterprises* Nov 17 2022 Ambassador (Dr.) Robin Renee Sanders new book on *The Rise of Africas Small & Medium Size Enterprises* (SMEs) is an insightful examination of the dramatic shift in the development paradigm for Sub Saharan Africa driven

in large part by the imaginative, innovative, and insta-impact leadership of the regions small businesses or SMEs. SMEs have helped drive economic development, growth and aided in increasing the size of the Continents middle class, Sanders says. With the Introduction to the book by renown civil rights leader Ambassador Andrew Young, and the Foreword by Sub Saharan Africas leading businessman, Mr. Aliko Dangote, Sanders book credits the determination of Africa SMEs and entrepreneurs (which includes African nationals, immigrants and African Americans) for stepping into the void left by 40-years of post-independence development approaches that had little impact on reducing overall poverty and creating jobs in the region. Africas dynamic entrepreneurial spirit of Generation-Xers and Millennials are and have formed SMEs and social enterprises that today are responsible for conceiving and inventing many of the new apps, and answers to address the regions age-old poverty issues, Sanders emphasizes. Africa SMEs are not only a key driver for jobs, but serve as an additional catalyst to grow the middle class. Sanders argues that it was the Rise of the Africa SME converging with technology and its mobility that has changed, over the last decade, the focus and direction of development in Sub Saharan Africa. The book has a few vignettes from Sanders diplomatic life and work as CEO of the FEEEDS Advocacy Initiative with Africa SMEs over the years, as well as regional examples of some of innovative things Africa entrepreneurs are doing in sectors ranging from agriculture and food security to energy and climate change. The book also walks readers through what donors, foundations and African stock markets are doing today to help in the SME space. Sanders ends with

recommendations of what more can be done by donors, African governments, and the new U.S. administration to further assist Africa SMEs, particularly the group she calls the critical mass, and those at the fragile end of Africa's middle class.

*Physical Processes in a Large Lake* Feb 14 2020 Published by the American Geophysical Union as part of the Coastal and Estuarine Studies, Volume 48. Lake Biwa is very important in a social context. It is the largest lake in Japan and presently supplies some 15 million people in four prefectures, Shiga, Kyoto, Osaka and Hyogo with drinking water, making it the single most important source of water in Japan. It is also important from a geographical perspective. It is a natural lake born some five million years ago and is therefore geologically one of the oldest lakes in the world.

*Minimum Size Sampling Plans for Small Lots for a Given Lot Tolerance Percent Defective (LTPD) and Probability of Acceptance* Feb 08 2022 This report presents a set of tables which give the minimum sample size required to accept a small lot with the probability of acceptance less than or equal to beta for a given LTPD. The tables are based on the hypergeometric probability distribution for lot sizes  $N$  of 10(5) 100; beta of 0.01, 0.025, 0.05, 0.10(0.10) 0.90, 0.95, 0.975 and 0.99; and acceptance numbers  $a$  of 0(1)3.

**Small Sample Size Solutions** Sep 15 2022 Researchers often have difficulties collecting enough data to test their hypotheses, either because target groups are small or hard to access, or because data collection entails prohibitive costs. Such obstacles may result in data sets that are too small for the complexity of the statistical model needed to answer the research question. This unique book provides guidelines and tools for implementing solutions to issues that arise in small sample research. Each chapter illustrates statistical methods that allow researchers to apply the optimal

statistical model for their research question when the sample is too small. This essential book will enable social and behavioral science researchers to test their hypotheses even when the statistical model required for answering their research question is too complex for the sample sizes they can collect. The statistical models in the book range from the estimation of a population mean to models with latent variables and nested observations, and solutions include both classical and Bayesian methods. All proposed solutions are described in steps researchers can implement with their own data and are accompanied with annotated syntax in R. The methods described in this book will be useful for researchers across the social and behavioral sciences, ranging from medical sciences and epidemiology to psychology, marketing, and economics.

*Antitrust for Small and Middle Size Undertakings and Image Protection from Non-Competitors* Oct 16 2022 This publication provides an unparalleled comparative analysis of two "hot topics" in the field of antitrust and unfair competition laws with regard to a number of key countries. The first part of the book examines whether small and middle-sized businesses could or should be subject to specific competition rules. These businesses account for 99% of the enterprises in Europe and the United States, making this a particularly important topic. The papers consider both the public and private enforcement rules across a range of jurisdictions and a

detailed international report, prepared by Michele Carpagnano, identifies general trends and highlights differences and the most interesting features of national regulations. The second part of the book gathers contributions from various jurisdictions on the unfair competition question of whether a company could or should be protected against the use of their trademark, distinctive signs and other components of their image and identity on the part of non-competing companies. The papers focus on the fundamental issue of the competitive relationship as a condition of protection under unfair competition acts and the connection to intellectual property protection. The comprehensive and insightful international report, prepared by Martine Karsenty-Ricard, brings together these reflections by comparing various national positions. The book also includes the resolutions passed by the General Assembly of the LIDC following a debate on each of these topics, which include proposed solutions and recommendations. The International League of Competition Law (LIDC) is a long-standing international association that focuses on the interface between competition law and intellectual property law, including unfair competition issues.

Mathematical Modeling of Emission in Small-Size Cathode  
Sep 03 2021 This book deals with mathematical modeling, namely, it describes the mathematical model of heat transfer in a silicon cathode of small (nano) dimensions with the possibility of partial melting taken into account. This mathematical model is based on the phase field system, i.e., on a contemporary generalization of Stefan-type free boundary problems. The approach used is not purely mathematical but is based on the understanding of

the solution structure (construction and study of asymptotic solutions) and computer calculations. The book presents an algorithm for numerical solution of the equations of the mathematical model including its parallel implementation. The results of numerical simulation concludes the book. The book is intended for specialists in the field of heat transfer and field emission processes and can be useful for senior students and postgraduates.
