In August 2003 over 400 researchers in the field of science education from all over the world met at the 4th ESERA conference in Noordwijkerhout, The Netherlands. During the conference 300 papers about actual issues in the field, such as the learning of scientific concepts and skills, scientific literacy, informal science learning, science teacher education, modeling in science education were presented. The book contains 40 of the most outstanding papers presented during the conference. These papers reflect the quality and variety of the conference and represent the state of the art in the field of research in science education. For students and schools, the implementation of any science standards rests with teachers. For those teachers, an evolving understanding about how best to teach science represents a significant transition in the way science is currently taught in most classrooms and it will require most science teachers to change how they teach. That change will require learning opportunities for teachers that reinforce and expand their knowledge of the major ideas and concepts in science, their familiarity with a range of instructional strategies, and the skills to implement those strategies in the classroom. Providing these kinds of learning opportunities in turn will require profound changes to current approaches to supporting teachers' learning across their careers, from their initial training to continuing professional development. A teacher's capability to improve students' scientific understanding is heavily influenced by the school and district in which they work, the community in which the school is located, and the larger professional communities to which they belong. Science Teachers' Learning provides guidance for schools and districts on how best to support teachers' learning and how to implement successful programs for professional development. This report makes actionable recommendations for science teachers' learning that take a broad view of what is known about science education, how and when teachers learn, and education policies that directly and indirectly shape what teachers are able to learn and teach. The challenge of developing the expertise teachers need to implement the NGSS presents an opportunity to rethink professional learning for science teachers. Science Teachers' Learning will be a valuable resource for classrooms, departments, schools, districts, and professional organizations as they move to new ways to teach science. Looking to tackle climate change and climate science in your classroom? This timely and insightful book supports and enables secondary science teachers to develop effective curricula ready to meet the Next Generation Science Standards (NGSS) by grounding their instruction on the climate crisis. Nearly one-third of the secondary science standards relate to climate science, but teachers need design and implementation support to create empowering learning experiences centered around the climate crisis. Experienced science educator, instructional coach, and educational leader Dr. Kelley T. Le offers this support, providing an overview of the teaching shifts needed for NGSS and to support climate literacy for students via urgent topics in climate science and environmental justice – from the COVID-19 pandemic to global warming, rising sea temperatures, deforestation, and mass extinction. You'll also learn how to engage the complexity of climate change by exploring social, racial, and environmental injustices stemming from the climate crisis that directly impact students. By anchoring instruction around the climate crisis, Dr. Le offers guidance on how to empower students to be the agents of change needed in their own communities. A range of additional teacher resources are also available at www.empoweredscienceteachers.com. A Teacher's Guide to Science and Religion in the Classroom provides practical guidance on how to help children access positive ways of thinking about the relationship between science and religion. Written for teachers of children from diverse-faith and non-faith backgrounds, it explores key concepts, identifies gaps and common misconceptions in children's knowledge, and offers advice on how to help them form a deeper understanding of both science and religion. Drawing on the latest research as well as the designs of successful workshops for teachers and for children, there are activities in each chapter that have been shown to help children understand why science and religion do not necessarily conflict. The book highlights children's interest in the so-called "Big Questions" that bridge science and religion and responds to the research finding that most children are missing ideas that are key to an explanation of why science and religion can be harmonious. The book explores key concepts and ideas including: Nature of science Power and limits of science Evolution, genes and human improvement Miracles, natural disasters and mystery Profiles of scientists, including Galileo and Newton A Teacher's Guide to Science and Religion is an essential companion for preservice and practising teachers, providing session plans and pedagogic strategies, together with a cohesive framework, that will support teachers in fostering children's curiosity and enthusiasm for learning. It explores the ways that those approaches could be promoted across various contexts in Europe through initial teacher preparation, induction programmes and professional development activities. It illustrates connections between scientific knowledge deriving from the science education research community, teaching practices deriving from the science teachers' community, and educational innovation. Inquiry-Based Science Teaching and Learning (IBST/L) has been promoted as a policy response to pressing educational challenges, including disengagement from science learning and the need for citizens to be in a position to evaluate evidence on pressing socio-scientific issues. Effective IBST/L requires well-prepared and skilful teachers, who can act as facilitators of student learning and who are able to adapt inquiry-based activity sequences to their everyday teaching practice. Teachers also need to engage creatively with the process of nurturing student abilities and to acquire new assessment competences. The task of preparing teachers for IBST/L is a challenging one. This book is a resource for the implementation of inquiry-oriented approaches in science education and illustrates ways of promoting IBST/L through initial teacher preparation, induction and professional development programmes. Inquiry-based general science curriculum for the third grade featuring a text/workbook that students can write in. Inquiry-based general science curriculum for the first grade featuring a text/workbook that students can write in. Science is rightly a fundamental part of primary school education, but that doesn't make it easy to teach - especially for teachers without a science background. This straight talking book from an experienced science writer and communicator looks at how to make the most of it and give primary school children a good grounding in the topic. Getting Science sets out to engage the sense of wonder. The science in this book is not for the children, but for the adults who have to explain it. Starting with a whirlwind tour of the great milestones of modern science, Getting Science goes on to take each of the main curriculum topics and give it a new twist. It provides the information needed to understand the key topics better and be able to put them across with enthusiasm and energy. This book will help teachers to get children excited by science, to understand science rather than just answer questions. Getting Science makes science fun, approachable and comprehensible to those who just don't get it. Globally, mathematics and science education faces three crucial challenges: an increasing need for mathematics and science graduates; a declining enrolment of school graduates into university studies in these disciplines; and the varying quality of school teaching in these areas. Alongside these challenges, internationally more and more non-specialists are teaching mathematics and science at both primary and secondary levels, and research evidence has revealed how gaps and limitations in teachers' content understandings can lead to classroom practices that present barriers to students' learning. This book addresses these issues by investigating how teachers' content knowledge interacts with their pedagogies across diverse contexts and perspectives. This knowledge-practice nexus is examined across mathematics and science teaching, traversing schooling phases and countries, with an emphasis on contexts of disadvantage. These features push the boundaries of research into teachers' content knowledge. The book's combination of mathematics and science enriches each discipline for the reader, and contributes to our understandings of student attainment by examining the nature of specialised content knowledge needed for competent teaching within and across the two domains. Exploring Mathematics and Science Teachers' Knowledge will be key reading for researchers, doctoral students and postgraduates with a focus on Mathematics, Science and teacher knowledge research. Science Teaching explains how history and philosophy of science contributes to the resolution of persistent theoretical, curricular, and pedagogical issues in science education. It shows why it is essential for science teachers to know and appreciate the history and philosophy of the subject they teach and how this knowledge can enrich science instruction and enthuse students in the subject. Through its historical perspective, the book reveals to students, teachers, and researchers the foundations of scientific knowledge and its connection to philosophy, metaphysics, mathematics, and broader social influences including the European Enlightenment, and develops detailed arguments about constructivism, worldviews and science, multicultural science education, inquiry teaching, values, and teacher education. Fully updated and expanded, the 20th Anniversary Edition of this classic text, featuring four new chapters—The Enlightenment Tradition; Joseph Priestley and Photosynthesis; Science, Worldviews and Education; and Nature of Science Research—and 1,300 references, provides a solid foundation for teaching and learning in the field.
