Dispelling these myths, Six Sigma for Powerful Improvement: A Green Belt DMAIC Training System with Software Tools and a 25-Lesson Course clarifies the long-accepted statistical and logical processes of Six Sigma and provides you with tools you can use again and again in your own "real world" projects—removing any doubts regarding their simplicity and "doability.". to Counseling Toward Solutions When it was first published in 1995, Linda Metcalf's book Counseling Toward Solutions became an instant bestseller. The book offered a new and positive program for changing individual behavior that helped K-12 students with their own problems and gave them self-esteem in the process. Now, The Field Guide to Counseling Toward Solutions offers school counselors, teachers, and administrators a complete program for changing the way that schools deal with a variety of issues. From an alternative school program that enlists the power of teacher mentors to the elementary program that involves the teacher, parent, and student in the counseling process, this book shows how to make change happen and how to make it last. The solution-focused approach helps everyone involved to begin their own change process by noticing when a problem does not occur, rather than focusing on the problem or what caused it. It includes information targeted to specific age groups—elementary school students, middle schoolers, and adolescents—because each developmental stage requires a certain perspective and focus in order to collaborate and reach solutions. The Field Guide to Counseling Toward Solutions offers guidelines for developing a school-wide program that encompasses virtually all of the day-to-day programming that schools must provide for students. The book includes techniques and suggestions for: Training staff to become more solution-focused and student-centered Working together with teams, teachers, and parents so that the "system" creates and maintains change Creating support groups for parents and students Reducing special education referrals through solution-focused conversations In this book, bestselling author and veteran school counselor Linda Metcalf offers more than a simple positive strategy or technique—she provides a way to think about school "clients" that can change interactions and guarantee success. Consistent with international trends, there is an active pursuit of more engaging science education in the Asia-Pacific region. The aim of this book is to bring together some examples of research being undertaken at a range of levels, from studies of curriculum and assessment tools, to classroom case studies, and investigations into models of teacher professional learning and development. While neither a comprehensive nor definitive representation of the work that is being carried out in the region, the contributions—from China, Hong Kong, Taiwan, Korea, Japan, Singapore, Australia, and New Zealand—give a taste of some of the issues being explored, and the hopes that researchers have of positively influencing the types of science education experienced by school students. The purpose of this book is therefore to share contextual information related to science education in the Asia-Pacific region, as well as offering insights for conducting studies in this region and outlining possible questions for further investigation. In addition, we anticipate that the specific resources and strategies introduced in this book will provide a useful reference for curriculum developers and science educators when they design school science curricula and science both pre-service and in-service teacher education programmes. The first section of the book examines features of science learners and learning, and includes studies investigating the processes associated with science conceptual learning, scientific inquiry, model construction, and students' attitudes towards science. The second section focuses on teachers and teaching. It discusses some more innovative teaching approaches adopted in the region, including the use of group work, inquiry-based instruction, developing scientific literacy, and the use of questions and analogies.
